

The company

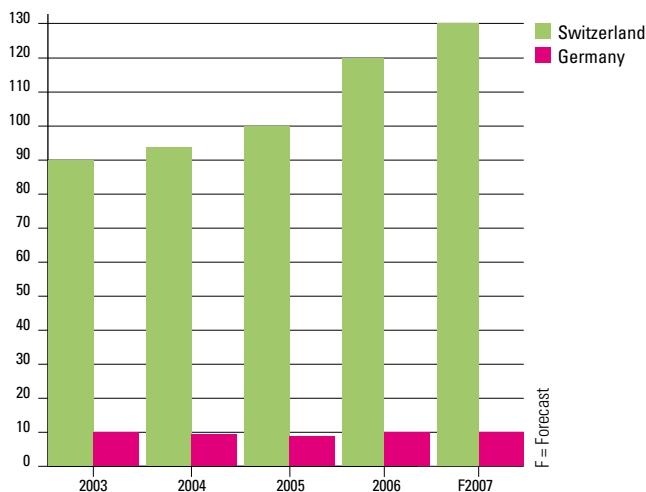

Founded in 1992, DIGITAL-LOGIC is a world leader in technology. The company develops and produces miniature computer systems based on the Intel® architecture, primarily with x 86 and Pentium® processor performance. The product portfolio comprises the standard products with embedded computer boards, embedded computer modules and the MICROSPACE® computer systems. DIGITAL-LOGIC is ISO 9001 certified.

Sales

Represented around the world through subsidiaries and partner companies, DIGITAL-LOGIC is excellently positioned for sales in the high-growth embedded computer market. Experienced sales specialists and engineers provide on-site customer care and supply customers with appropriate products and customer-specific, individualized embedded computers.
